

INTEGRATED ANESTHESIA MACHINE

ABSTRACT OF THE DISCLOSURE

[0020] The present invention provides an integrated anesthesia machine with at least
5 one display adjustably integrated into to the main body of the machine so as not to protrude
out of the frame and thereby not obstruct the operator's view of the operation site. The
anesthesia machine generally includes a machine frame appropriately equipped for use in
administering anesthesia to subjects during a surgical intervention at least one display, such
as a flat panel display, for patient monitoring that is adjustably mounted to the machine
10 frame.
